Feel free to forward this invitation to colleagues interested in attending the event.

REGISTER HERE
to attend the virtual launch of the
SIDS Lancet Countdown 2024 Report

About the Report

The inaugural 2024 Small Island Developing States report of the Lancet Countdown on health and climate change is the collaborative effort of 35 authors and showcases the findings from 25 indicators developed by over 100 leading researchers worldwide. The first annual report from the Lancet Countdown SIDS Regional Centre provides key evidence from small islands at the frontline of climate change impacts.

The report asserts the urgency of a significant paradigm shift to accelerate adaptation to unprecedented climate change in SIDS. That response is needed now.

About the Launch Event

This event will showcase the indicator evidence of the many impacts of climate change on health, the major trends, and the progress made toward achieving climate-resilient health and living in SIDS. Our veritable authors and experts will discuss the implications of these new findings against the backdrop of global events that may dictate the future success of climate and health interventions.

Please visit [our website](#) for the report, latest updates, and further details on other regional and national launch events happening around the world.

See you there!

Kind Regards,

Dr. Georgiana Gordon-Strachan

Director of the Lancet Countdown SIDS
